

MA-161 Course Description (W,04)

Calculus I: Meets Mon thru Fri at 10 a.m. in WEST-1705.

Instructor: Bob Myers New Science Facility NSF-1135 Office hours are on my door and on my home page.
Office Ph: 227-1610 Home Ph: 249-1137 E-mail address: rmyers@nmu.edu
Web Site URL: <http://euclid.nmu.edu/~rmyers/>

Text: Single Variable Calculus, 5th Edition, James Stewart

Prerequisites: MA-115 passed with C- or better, or equivalent.

Course Description: This introductory calculus course contains a brief review of precalculus mathematics, limits, the derivative, differentiation rules, applications of the derivative, the definite integral, the Fundamental Theorem of Calculus, and an introduction to the applications of the integral. The emphasis throughout this course is on the meaning, both theoretical and applied, of the concepts of calculus. Most important, you will learn to apply the concepts and techniques of calculus to "real world" problems.

Assignments: Reading and problems will be assigned daily or for blocks of time. I expect the average student to do about two hours of outside preparation for each hour of class time.

Please note the time expectation outside of class. Most class time will be spent on my telling or showing or explaining things -- hopefully with your involvement. Real learning, however, will occur when you use the day's class experience as you read the text, work on problems, transcribe your notes, relate new ideas to what you've previously learned, and so forth. Someone once said that a teacher can provide an explanation; the student must provide the understanding. For the most part, you'll get explanations in the classroom; your understanding will most often occur when you study outside of class.

Because class time is limited, not everything you're expected to learn will be explained in class. I urge you to make use of other resources. Here are some: obviously, read the text; use the Math Lab (See below for a description of the Math Lab.); consult other texts (many are available in the Math Lab and can be checked out overnight); correspond with your classmates via phone or e-mail; form study groups; correspond with me via phone or e-mail; or visit me in my office. You should develop regular study habits. I suggest you do the day's homework as soon as possible after class.

Just as you had to memorize the multiplication tables in grade school before you could do other things in arithmetic, there are some things in this course that will have to be memorized as well. I will tell you explicitly what these things are when we encounter them.

Also, you will have to work quickly and neatly on tests and quizzes. (There will be no partial credit if your work is sloppy.) This requires practice outside of class, so do all (or most) of the assigned problems in the same neat manner that you would have to do them on tests. Working together in this class is encouraged but ultimately you should write up all the problem solutions yourself. (For collected assignments, you may talk with others about the problems but the work you submit must be substantially your own. The final write up must be entirely your own.)

Math Lab: A special room, WEST-3810, has been set aside as a mathematics study room. There will be a tutor there to answer questions. (My office is nearby so you can ask me questions as well.) The Lab will be open most weekdays from 9 am to 4 pm. **Please note:** The role of the Math Lab tutor is to provide help when the instructor is unavailable. A tutor can answer questions about the material or about problems, but s/he cannot be expected to teach you the material nor to show you in detail how to solve problems. In particular, you cannot ask the tutor to solve problems for you that you must turn in as a graded homework assignment.

Attendance: Required. At most five unexcused cuts are permitted. Quizzes and tests must be taken at their scheduled times. No makeup exams will be given (and no late assignments will be accepted) except in cases of utmost gravity. In such a case, you must notify me before the exam that you will be missing. Times for quizzes and homework submission will usually be announced in class. Test dates are given on the tentative schedule below.

Calculator / Computer Algebra System (CAS): In the past, a graphing calculator was required for this course. Since you now have your own laptop computers, the Math Department has provided you with a copy of the CAS called TI Interactive which is installed on your computer. You use the CAS in much the same way that you use a graphing calculator. Since classroom activities will often involve using the calculator, you will have to boot up your computer when you come to class and have the TIInteractive program immediately available.

Many of you have probably used graphing calculators in the past and you may already have your own calculator. If you have a calculator, you should bring it to class since it is much more convenient to use than the CAS. If you decide to buy a graphing calculator, the Math Department recommends the TI-85 or TI-86 which are available in the NMU Bookstore and at various local stores.

You will be expected to use your CAS or your calculator when taking tests.

Graded Work: There will be quizzes, some unannounced, and there will be some collected homework. There will also be five regular exams and a comprehensive final exam. There will be opportunities for extra credit (EC) throughout the semester.

Note about Exams: In the past, I've permitted students to take up to two hours to do the regular exams and I will do so again this semester. These exams will be given in whatever classrooms I can find that will be available for a two-hour block. I'll tell you the room location the day before the exam. The exams will be given from 9 to 11 or from 10 to 12. If this would not work for you, please ask me about other arrangements.

Course Grades: There will be five "units" of study, at the end of each of which there'll be a unit exam. During the unit, there will usually be quizzes and collected homework. There will also be opportunities for "extra credit" (EC) -- extra problems, classroom presentations, writing up your solution to a problem for the class, etc. A unit grade is the weighted average of all your graded work during that unit. Your pre-final average is the weighted average of the five unit grades. The final exam will count either 20% or 50% of your grade, whichever will be more beneficial to you. Thus, your final average will be the higher of these two numbers

$$\text{final avg} = 80\% \cdot (\text{pre-final avg}) + 20\% \cdot (\text{final exam score})$$

$$\text{final avg} = 50\% \cdot (\text{pre-final avg}) + 50\% \cdot (\text{final exam score}).$$

Proviso: For the second option to apply, you must take all the hour exams and you must satisfy the attendance requirements. Also, the second option will apply if you fail to take the final exam.

The lower cutoffs for A-'s, B-'s, etc. will about be 90%, 80%, 70%, and 60%. Plus and minus grades will be given.

For your information, 261 students have taken this course from me since F,96. The distribution of their grades: 20% A's; 29% B's; 21% C's; 7% D's; 5% F's; 18% W's.

Tentative Schedule:

<u>Content</u>	<u>Test Date</u>	<u>Content</u>	<u>Test Date</u>
Selected Review Topics from Ch 1 & Appendix D. Also some limit concepts from Ch. 2	Thurs, 1/29	Applications of the Derivative. (Much of Ch 4)	Fri, 3/19
Concept of Derivative. (Sections 2.7 - 3.8, 3.10)	Wed, 2/25	Concept of Integral (Sections 5.1 - 5.5)	Tues, 4/13
		Applications of the Integral (Sects 6.1, 6.2, 6.5)	Thurs, 4/22

The Final exam is scheduled for Thurs, 4/29.

Further Notes: Bring your text, calculator and notebook (for your class notes and homework solutions) to every class, starting Tuesday, the second class meeting. All tests, quizzes and homework are to be done in pencil.

If you have a need for disability-related accommodations or services, please inform the Coordinator of Disability Services in the Disability Services Office at 1104 University Center (227-1737). Reasonable and effective accommodations and services will be provided to students if requests are made in a timely manner, with appropriate documentation, in accordance with federal, state, and university guidelines.

Information Card: Please answer the questions below on the index card. Number your answers as indicated. **Be sure to answer 11.**

Front

1. Name	2. Year in College
3. Major	4. Minor
5. What previous math courses have you taken in college and what grades did you get in those courses?	
6. What math courses did you take in high school and approximately what grades did you get in those courses?	
7. If you're repeating this course, when did you take it and what was your grade?	
8. What additional math courses do you plan to take in college?	

Back

9. Why are you taking this course?
10. Briefly, what are your career plans?
11a. Do you have a graphing calculator? If so, what kind?
b. If you have a calculator, are you [very familiar, somewhat familiar, totally unfamiliar] with its use?
c. If you don't have one, is there some kind of graphing calculator that you know how to use? If so, what kind and how competent are you at using it?
12. E-mail address.
